

**Amendments to the Specification:**

*On page 7, please replace the paragraph beginning at line 15, with the following amended paragraph:*

C-1  
Fig. 7 is an enlarged view illustrating a portion "B" of Fig. 6, illustrating an output state of the data drive IC according to the preferred embodiment of the present invention. As shown in Fig. 7, 128 channels of each data drive IC 311 become a floating state to output signals through 256 channels. Preferably, the channels that become a floating state are as follows: a 2nd channel, a 5th channel, an 8th channel, ..., and a 383rd channel. In other words, the 2<sup>nd</sup>, 5<sup>th</sup>... (3n-1)th channels become a floating state.
